KIRAN KUMAR

SOFTWARE ENGINEER

kiran.nxt19@gmail.com • 9738370501

CORE SKILLS

Frontend

Angular • React • HTML5 • CSS3 • SASS • Bootstrap • Material UI • JavaScript • TypeScript • RxJS

Backend

C#/.NET • Node.js • Express.js • Django • REST APIs • GraphQL

Databases

Microsoft SQL Server • MySQL • MongoDB • Firebase Firestore

Cloud & Deployment

Firebase • Amazon/AWS • Heroku • DriveHQ • GoDaddy • Somee

API & Tools

Postman • JSON Server • Mock Server • Git • Visual Studio Code • PyCharm

Languages

C# • VB.NET • Python • Java • JavaScript • TypeScript

EDUCATION

MCA, Computer Science

Gulbarga University, Kalaburagi (2018)

BCA

VHE College, Gulbarga

PROFESSIONAL SUMMARY

Software Engineer and Full Stack Developer with 8+ years of experience in web application development, with strong hands-on experience across Angular, React, .NET, Node.js, Express.js, Django, REST APIs, GraphQL, SQL Server, MySQL, MongoDB and Firebase. Experienced in UI development, middleware, API integration, authentication and authorization, cloud deployment, debugging, testing and Git-based development. Comfortable collaborating with product teams, analyzing requirements and delivering maintainable web solutions.

PROFESSIONAL EXPERIENCE

Minds NXT Techno Vision Pvt. Ltd. — Software Engineer | Jul 2018 – Present

- Designed and developed responsive web user interfaces using Angular and React, with HTML, CSS, SASS, Bootstrap and Material UI.
- Developed middleware and backend services for Angular applications using Node.js and Express.js.
- Implemented REST API integrations and worked with Postman, JSON Server and mock-server environments for application development and testing.
- Worked with GraphQL in Angular applications and developed authentication and authorization functionality.
- Built cloud-connected solutions using Firebase Firestore and real-time database capabilities.
- Worked with SQL-based applications using .NET and Express.js, and developed solutions with SQL Server, MySQL and MongoDB.
- Deployed web applications across cloud and hosting platforms including Firebase, Amazon/AWS, Heroku, GoDaddy and Somee.
- Collaborated with product management teams to gather requirements, assess feasibility, contribute to technical discussions and deliver UI and application functionality.
- Participated in coding, debugging, testing and defect analysis, with a focus on resolving issues within agreed timelines.

PROJECT EXPERIENCE

Learning Management System

Angular • Mock Server • JSON Server | Team: 2 | Role: Designer & Software Developer | Mar 2019 – Mar 2020

- Developed a learning management solution for tracking studies and interactions between students and staff within an organization.
- Handled UI design, development, requirement analysis, coding, bug fixing and testing.
- Coordinated with product management for requirement gathering and provided technical inputs during discussions.

QBS Care

C#/.NET • Microsoft SQL Server | Team: 2 | Role: Software Developer | Mar 2020 – Mar 2021

- Worked on a service-tracking application designed to record customer service usage, staff activity, and service dates/times.
- Contributed to bug fixing, testing, defect analysis and feasibility assessment for reported issues.
- Collaborated with product management on requirements and implementation priorities.

GeneSilico — AI-First Oncology Platform

UI/UX & Frontend Experience | Aug 2022 – Jun 2023

- Designed and refined user interfaces for AI-driven oncology workflows, focusing on clarity, usability and information hierarchy across complex clinical data.
- Worked on responsive UI patterns for patient, clinician and administrative experiences aligned with GeneSilico's products including Casebook, MyCasebook, Digital Twin and the Oncology Clinical Control Plane.
- Translated complex workflows such as patient records, therapy-ranking views, evidence-linked recommendations and AI agent interactions into intuitive web experiences.
- Contributed to interaction design, form design, reusable UI components, visual consistency and usability improvements for data-intensive screens.
- Collaborated with product and engineering stakeholders to turn requirements into practical UI solutions and refine experiences based on feedback.

POD Health — Healthcare AI Platform

Development Support Experience | Aug 2022 – Jun 2023

- Provided development support for a healthcare AI platform connecting clinician, patient/family and precision-prescribing workflows across OpenMind, Piper and NeuroPrecision Dx.
- Supported web application workflows involving patient records, clinical notes, AI-assisted recommendations, treatment planning, billing and pre-authorization processes.
- Assisted with troubleshooting and validation of UI, API and workflow issues across interconnected healthcare application experiences.
- Worked with data-intensive interfaces and integrations involving EHR, laboratory, genomics and patient-provided data, with attention to reliable information flow and usability.
- Collaborated with product and engineering stakeholders to analyze issues, validate fixes, support releases and improve application behavior.

Mavvrik — AI&Hybrid Cloud Cost Management Platform

SDET / Development Support Experience | Jul 2023 – Sep 2026

- Performed software quality validation for a FinOps platform covering cloud, AI/GenAI, SaaS and hybrid infrastructure cost management workflows.
- Designed and executed functional, regression and integration test scenarios across dashboards, cost visibility, allocation, forecasting, anomaly detection, recommendations and governance workflows.
- Validated end-to-end data flows and UI behavior for cloud and AI cost telemetry, including model/agent usage, customer and user attribution, sessions, traces and cost signals.
- Tested API-driven workflows and integrations, supporting validation of onboarding, authentication, data ingestion and platform services.
- Investigated defects by reproducing issues, analyzing expected versus actual behavior, documenting findings and collaborating with engineering teams on fixes.
- Supported release validation by executing regression checks, verifying defect fixes and helping maintain application stability across evolving platform features.
